

Weekly Coal Production

Production for Week Ended:
October 27, 1990

Preface

The *Weekly Coal Production* (WCP) provides weekly estimates of U.S. coal production by State. Supplementary data are usually published monthly in two supplements: the Coal Exports and Imports Supplement and the Domestic Market Supplement. This week's Coal Exports and Imports Supplement contains detailed monthly data on U.S. coal and coke exports and imports. The Domestic Market Supplement contains detailed monthly electric utility coal statistics, by Census Division and State, for generation, consumption, stocks, receipts, sulfur content, prices, and the origin and destination of coal shipments. This supplement also contains summary-level, monthly data for all coal-consuming sectors on a quarterly basis.

Preliminary coal production data are published quarterly, based on production data collected using Form EIA-6, "Coal Distribution Report." Based on 1988 data, the coal estimation error for a quarter at the national level (i.e., the difference between the sum of the weekly estimates for a quarter and the quarterly EIA-6 preliminary data) ranges from 1 percent to 4 percent.

Final coal production data are published annually, based on the EIA-7A coal production survey. Based on 1988 data, the revision error for a quarter at the national level (i.e., the difference between the EIA-6 preliminary data and the EIA-7A final data) ranges from 0.02 percent to 0.08 percent.

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution*, the *Quarterly Coal Report*, *Coal Production 1988*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson and Michelle D. Bowles under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at 202/586-8800.*

Summary

U.S. coal production in the week ended October 27, 1990, as estimated by the Energy Information Administration, totaled 22 million short tons. This was slightly higher than production in the previous week, and in the comparable week in 1989. Production east of the Mississippi River totaled 13 million short tons, and production west of the Mississippi River totaled 8 million short tons.

U.S. coal exports in August 1990 rose to 10 million short tons, the highest monthly level in nearly 2 years. This raised the total coal exported in the first 8 months of 1990 to 69 million short tons, which was 5 million short tons more than in the corresponding period of 1989. The three principal destinations, together receiving more than a third of the total, were Canada, Japan, and Italy. Compared with the January-August period in 1989, shipments to Canada and Japan were down by 7 and 12 percent, respectively, whereas those to Italy were relatively unchanged. The largest tonnage increases were to Belgium and Luxembourg, France, and the Netherlands.

Metallurgical coal exports, the mainstay of U.S. coal exports, totaled 43 million short tons in the first 8 months of 1990, the same amount as a year earlier. Japan was the largest importer, receiving 7 million short tons. This was 12 percent less than in the same period in 1989, and was attributable mostly to competition from Australian and Canadian coal. Italy was the second-largest importer, receiving nearly 5 million short tons, slightly more than in the first 8

months of 1989. Other large importers of U.S. metallurgical coal were Belgium and Luxembourg, Brazil, and France. Shipments to Canada were about one-fourth lower, reflecting a decline in the country's steel production.

Steam coal exports from January through August 1990 amounted to 27 million short tons. This was 5 million short tons more than in the comparable period in 1989, and accounted for virtually all of the rise in total U.S. coal exports in the first 8 months of 1990. Canada was by far the principal destination, receiving over 6 million short tons, slightly higher than in the same period of 1989. Other major destinations were Italy, Taiwan, and the Netherlands.

The value of U.S. coal exports from January through August 1990 was \$3 billion, based on an average price of \$42.73 per short ton. The port of Norfolk handled 36 million short tons of coal exports, about half of the total.

U.S. coal imports in August 1990 amounted to 120,000 short tons, the lowest monthly level since January 1989. In the first 8 months of 1990, coal imports totaled nearly 2 million short tons, 6 percent less than in the same period a year earlier. More than half of the coal was imported from Colombia, and over one-third was from Canada. Total coal imports were valued at \$59 million, based on an average price of \$33.94 per short ton.

^{NM}Percent change calculation not meaningful as value is greater than 500.

¹Based on the U.S.-Canada Free Trade Agreement, as of January 1990 the U.S. Department of Commerce began reporting statistics on U.S. exports to Canada based on information on imports provided monthly by the Canadian government. For this reason the quantity for both coal and coke, coal type (metallurgical and steam), and value of both coal and coke are no longer strictly comparable to the historical U.S. series due to the additional time lag in reporting.

²Includes countries with exports less than or equal to 50,000 short tons in 1989.

Note: Total may not equal sum of components because of independent rounding.

*Rounded to zero.

¹Based on the U.S.-Canada Free Trade Agreement, as of January 1990 the U.S. Department of Commerce began reporting statistics on U.S. exports to Canada based on information on imports provided monthly by the Canadian government. For this reason the quantity for both coal and coke, coal type (metallurgical and steam), and value of both coal and coke are no longer strictly comparable to the historical U.S. series due to the additional time lag in reporting.

²Includes countries with exports less than or equal to 50,000 short tons in 1989.

³Average price of all coal exports in this category.

Note: Total may not equal sum of components because of independent rounding. Average price is based on the free alongside ship (f.a.s.) value. The average prices presented in this table are considered to be representative prices for coal exports and fall within the range of \$28 to \$50 inclusively.

¹Based on the U.S.-Canada Free Trade Agreement, as of January 1990 the U.S. Department of Commerce began reporting statistics on U.S. exports to Canada based on information on imports provided monthly by the Canadian government. For this reason the quantity for both coal and coke, coal type (metallurgical and steam), and value of both coal and coke are no longer strictly comparable to the historical U.S. series due to the additional time lag in reporting.

²Includes countries with exports less than or equal to 50,000 short tons in 1989.

Note: Total may not equal sum of components because of independent rounding.

¹Average price of all coal imports.

Note: Total may not equal sum of components because of independent rounding. Average price is based on the free alongside ship (f.a.s.) value. The average prices presented in this table are considered to be representative prices for coal imports and fall within the range of \$20 to \$50 inclusively.
